

BATEC Solar

BATEC Solar A/S, established 1975, is today a major manufacturer of solar collectors and selective coating for solar collector manufacturing.

BATEC produces the unique CuStrip that combines high efficiency absorbers at low price.

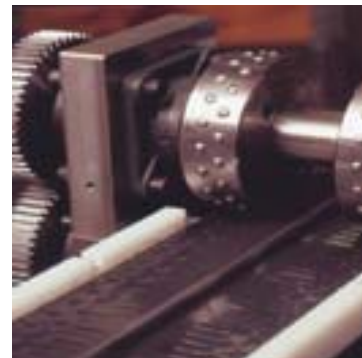

CuStrip is an absorber strip consisting of a copper strip roll bonded to a copper tube under high pressure. This product minimises consumption of raw materials and performs a unique heat transfer from absorber surface to water media. CuStrip can be installed in flat plate collectors as well as in vacuum tubes.

BATEC is as well supplying turnkey factories for manufacturing collectors at buyer countries, saving transport costs and create jobs at location. Turnkey deliveries are know-how, personal training and delivery of special equipment needed for local production.

BATEC also produce high efficient selective coating for solar collector absorbers.

Home market sales consist of solar systems for private houses as well as institutes, schools, hospitals, nursery houses and sport facilities.
